Chem. 265:1858-1861 (1990).

- FUNCTION: PACTOR IX TAS A VITAMIN K-DEPENDENT PLASMA PROTEIN THAT PARTICICAMINES IN THE INTRINCIC PATHANY OF BLOOD COAGULATION BY CONVERTING PACTOR X TO TITS ACTIVE FORM IN THE PRESENCE OF CA++ IONS, PHOSPHOLIPIDS, AND PACTOR VIIIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             - I- SUBJUILT: PACTOR IX S.

- SUBJUILT: PACTOR IX IS ACTIVATED BY PACTOR XIA, WHICH EXCISES THE ACTIVATION PERTINE AND THIS PRODUCES A MOLECULE CONSISTING OF 2.

- HIGGELANDROS CALCIUM BINDS TO THE GAMMA-CARBOXYGLITAMIC ACID (GLA) RESIDUES AND WITH STRONGER APPINITY, TO ANOTHER SITE, BEYOND THE GLAD DOMAIN HIS CIPAL DOMAIN SEDUCES PAWILY.

- SUBGNIT: PROTOR IX IS ACTIVATED BY FACTOR XIA, WHICH EXCISES THE ACTIVATION PERPINE AND THUS PRODUCES A MOLECULE CONSISTING OF 2 CHAINS HELD TOCETHER BY ORD OR MORE DISILETIDE BONDS.
- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.
- SIMILARITY: CONTAINS 2 EGF-LIKE DOMNINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FACTOR IXA (ACTIVE FORM) LIGHT CHAIN. Sequence 11, Application US/08797842
Patent No. 292706
GENERAL INFORMATION:
APPLICANTY: Mertens, Koenrad et al.
TITLE OF INVENTION: Antibodies specific for a haemostatic protein,
TITLE OF INVENTION: their use for isolating intact protein, haemostatic compositi
NUMBER OF SEQUENCES: 16
                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER READABLE FORM:
